SLEW SAFE

Slew Safe delivers peace of mind for drivers, dogman, crane owners and site owners, with improved safety, risk management and duty of care.

Slew Safe simply and effectively allows the TIDD PC25 operator to pick and carry a load knowing that they will be warned and restricted. No other pick and carry crane is this safe.

TIDD PC25 is the only pick and carry crane with this level of safety
Slew Safe Patent Pending 741038

TRT’s TIDD PC25 is extremely maneuverable, slewing up to 42° working well inside the radius of other pick and carry cranes in its class. At only 2.5m wide the PC25 has a smaller foot print, with new Slew Safe it’s now even safer!

How Slew Safe Works

When the crane in operation moves from green and amber to RED, this is an overload notification (based on the lifting chart). This will activate the Slew Safe.

When the crane is operated in the GREEN and AMBER areas of the lifting chart, Slew Safe will remain inactive.

Activation of Slew Safe will:
- Reduce speed of the steering to 15%
- Make the steering harder with feedback through the steering wheel to operator
- The engine will “load up” making an audible sound change for operator
- Audible constant alarm inside and outside cabin to warn operator and dogman of overload.
- Retain ability to move back to safe operation zone GREEN

TIDD PC25 The Safest in its Class

Slew Safe is the latest innovation to turn the corner on crane safety!

Other safety features that make TIDD PC25 the safest pick and Carry Crane for your operation include:
- Higher operator position allowing better visibility
- Superior stability with front hydraulic suspension
- Auto side slope & articulation de-rating via Robway LMI eliminating the need for calculations by the operator on the job
- ROPS Cabin with FOPS option including full lap and diagonal seat belts, to ensure operator and dogman safety
- ABS brakes
